

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

1. (Previously Presented) A bow sight for use with a bow comprising:
 - (a) a pivot portion pivotally connectable to the bow comprising:
 - (i) at least one pin carried by the pivot portion, the pin including a sight point;
 - (ii) a first pin adjustment mechanism for moving the pin sight point vertically relative to the pivot portion; and
 - (iii) a second adjustment mechanism for allowing the pin to move relative to the pivot portion in a direction towards or away from a target.
2. (Previously Presented) The bow sight according to claim 1, further comprising a stationary portion configured for attachment to the bow, the pivot portion pivotally attached to the stationary portion.
3. (Previously Presented) The bow sight according to claim 1, wherein the sight point comprises an end of a fiber optic cable.
4. (Previously Presented) The bow sight according to claim 1, wherein the at least one pin includes a first vertically extending pin.
5. (Previously Presented) The bow sight according to claim 4, further comprising:
a second vertically extending pin carried by the pivot portion, the second pin including a second sight point, wherein the second sight point is carried such that it can be moved relative to the pivot portion both vertically and in a direction towards or away from a target.
6. (Previously Presented) The bow sight according to claim 5, further comprising a third, a fourth and a fifth vertically extending pin connected to the pivot portion, each of the pins including a sight point.
7. (Previously Presented) The bow sight according to claim 6, wherein each of the five sight points include an end of a fiber optic cable.

8. (Previously Presented) A bow sight for attachment to a bow, comprising:
 - (a) a first portion configured for attachment to the bow;
 - (b) a second portion pivotally connected to the first portion such that the first portion and the second portion pivot away from each other when the bow is aimed downwardly;
 - (c) at least one pin connected to the second portion;
 - (d) a first pin adjustment mechanism for moving the pin vertically relative to the second portion; and
 - (e) a second pin adjustment mechanism for allowing the pin to move relative to the second portion in a direction toward or away from the target.
9. (Previously Presented) The bow sight according to claim 8, wherein the at least one pin includes a vertical pin.
10. (Previously Presented) The bow sight according to claim 9, wherein the at least one pin includes a first pin, a second pin, and a third pin, and wherein each pin includes a sight point.
11. (Previously Presented) The bow sight according to claim 10, wherein the sight points include an end of a fiber optic cable.
12. (Previously Presented) The bow sight according to claim 9, wherein the first pin adjustment mechanism comprises a locking cam.
13. (Previously Presented) The bow sight according to claim 9, wherein the second pin adjustment mechanism comprises a set screw.
14. (Previously Presented) A method of targeting comprising:
 - (a) providing a bow sight comprising:
 - (i) a first portion and a second portion pivotally connected to the first portion such that the first portion and the second portion pivot away from each other when the bow is aimed downwardly;
 - (ii) at least one vertical pin carried by the second portion, the vertical pin including a sight point;

- (iii) a first pin adjustment mechanism for moving the pin and sight point vertically relative to the second portion; and
 - (iv) a second pin adjustment mechanism for moving the pin and sight point relative to the second portion towards or away from the target;
- (b) targeting an object by adjusting the vertical position of the sight point relative to the second portion, the object being at a set distance; and
 - (c) pivoting the second portion away from the first portion and targeting the second object at the set distance by adjusting the position of the sight point relative to the second portion in a direction towards or away from the target.

15. (Previously Presented) The method according to claim 14, wherein the step of pivoting the second portion comprises:

- (a) pivoting the second portion by aiming downwardly from horizontal.

16. (Cancelled)

17. (Currently Amended) A bow sight for attachment to a bow, comprising:

- (a) a first portion configured for attachment to the bow;
- (b) a second portion pivotally connected to the first portion to allow the second portion to pivot away from the first portion when the bow is aimed downwardly;
- (c) a pin carried by the second portion, the pin including a sight point; and
- (d) the pin being slidable relative to the second portion in a direction towards or away from the target

~~The bow sight according to claim 16, wherein the pin comprises a vertically extending first pin and wherein the bow sight further comprising a second vertically extending pin carried by the second portion, the second pin being slidable relative to the second portion in a direction towards or away from the target.~~

18. (Previously Presented) The bow sight according to claim 17, further comprising a third vertically extending pin carried by the second portion, the third pin being slidable relative to the second portion in a direction towards or away from the target.

19. (Currently Amended) The bow sight according to claim 17~~16~~, wherein the sight point includes an end of a fiber optic cable.
20. (Previously Presented) A method of sighting a bow comprising:
 - sighting the bow for a horizontal shot by setting a vertical position of a sight point relative to a pendulum member; and
 - sighting the bow for an angled shot by sliding the sight point relative to the pendulum member in a direction towards or away from the target while maintaining the vertical position of the sight point.
21. (Previously Presented) The bow sight according to claim 17, wherein the pins are arranged one behind the other in a common vertical plane.
22. (Previously Presented) The bow sight of according to claim 17, wherein each pin includes an end that is secured in a track.
